Report Overview

Inkjet printing is a digital printing technology and thus can be used to produce patterns without the need for masks and dies. The application of inkjet printing to ceramic decoration is a natural extension of its use in the conventional paper- and textile-based printing industry. However, the glazes and colors that have been developed for inkjet tile decoration using inkjet printing are likely to be very similar to those needed for ceramic additive manufacturing, at least in their physical properties. Thus the expertise originally developed for ink development in the tile printing sector will enable the development of suitable inks for ceramics additive manufacturing. In addition, because these inks are for the most part pigment particulate suspensions, there has been a need to develop printheads that are compatible with highly loaded ceramic suspensions, which will also benefit ceramics additive manufacturing.

The global Inkjet Ceramic Printing Machine market size was estimated at USD 469 million in 2023 and is projected to reach USD 765.86 million by 2032, exhibiting a CAGR of 5.60% during the forecast period.

North America Inkjet Ceramic Printing Machine market size was estimated at USD 134.22 million in 2023, at a CAGR of 4.80% during the forecast period of 2024 through 2032.
