Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inline Electric Cylinder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The design of Inline Electric Cylinder integrates technologies such as servo motors, servo drives, high-precision ball screws or planetary ball screws, forming a compact module. In this design, the servo motor and the drive screw of the electric cylinder are directly connected through a coupling, which greatly simplifies the system structure, reduces the number of transmission components, and significantly improves the rigidity and accuracy of the system. In addition, due to the encoder of the servo motor being able to directly feedback the displacement of the electric cylinder piston rod, the Inline Electric Cylinder performs well in terms of controllability and control accuracy.

The global Inline Electric Cylinder market size was estimated at USD 454.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
