### Report Overview:

An inorganic binder is an inorganic ingredient used to bind together two or more other materials in mixtures. Its two principal properties are adhesion and cohesion. Characteristics: Produce strong final agglomerates, permanently bond particles, withstand the rigors of storage, handling, packaging & shipping. Organic binders are combustible and are destroyed by heat. Hence they contribute a degree of collapsibility to the core and mould sand mixture. The commonly used organic binders are core oil (0.5 to 3 %), cereal (0.5 to 2 %), resins, plastics, pitch, dextrin, molasses, rosin, lignin, casein, gelatin, wood flour etc. Inorganic binders are not combustible and may have considerable strength at high temperatures, resistance to erosion and relatively non-collapsibles depending on their nature. The commonly used inorganic binders in core and mould making are Fire clay (
