Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inorganic Warm Box Binder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Inorganic Warm Box Binder is an emission-free silicate binder system primarily used in the foundry industry. It consists of a liquid binder and powder additives, and its strength is achieved through heat curing. It is environmentally friendly and heat-resistant. It can bond sand cores together without producing harmful gases during the casting process, making it suitable for various sand core bonding and repair applications. The upstream components include water glass (sodium/potassium silicate), modifiers/inorganic additives, and sand materials. Global sales in 2024 were approximately 50,000 tons, with an average market price of about US\$2,500 per ton. The scale of a single production line varies depending on the production process and investment scale. The industry's gross profit margin ranges from 20% to 35%.
