Report Overview

This kit uses a unique lysate that can effectively remove polysaccharides, polyphenols, etc. It can extract DNA from insects, mollusks, arthropods, roundworms and other samples. Samples stored in alcohols are also suitable for the extraction of this kit. One operation can process tissues less than 50Chemicalbookmg. The sample is digested by the lysate, and most of the polysaccharides and polyphenols are separated and removed by chloroform. After further purification by the separation column, high-purity DNA can be obtained. The obtained DNA can be used in PCR, Southern hybridization, enzyme digestion and other experiments.
