Abstracts

An Insect Repellent is a substance applied to skin, clothing, or other surfaces which discourages insects (and arthropods in general) from landing or climbing on that surface. Insect Repellents help prevent and control the outbreak of insect-borne (and other arthropod-borne) diseases such as malaria, Lyme disease, dengue fever, bubonic plague, and West Nile fever. Pest animals commonly serving as vectors for disease include insects such as flea, fly, and mosquito; and the arachnid tick. Insect Repellents are an alternative to the use of insecticides. They may be applied to the skin to protect an individual from the bites of mosquitoes, mites, ticks and lice or, less commonly, may be used to exclude insects from an area, such as in packaging to prevent infestation of stored products. Asia-Pacific is the largest region of Insect Repellent, with a market share about 35%. It was followed by North America with 30%. SC Johnson, Reckitt Benckiser, 3M, Spectrum Brands and Godrej are the top 5 manufacturers of industry, and they had about 65% combined market share.

The global Insect Repellent market size was estimated at USD 2362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
