## Abstracts

Insecticidal Soap is a type of pesticide made from potassium salts of fatty acids. It is used to control a variety of plant pests, particularly soft-bodied insects like aphids, whiteflies, spider mites, and mealybugs. The soap works by penetrating the insect's outer shell and causing cell damage, leading to dehydration and death. Insecticidal soaps are typically considered safe for use on most plants and are often used in organic gardening due to their low toxicity to humans, animals, and beneficial insects when used as directed.

The global Insecticidal Soap market size was estimated at USD 1002.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
