Abstracts

Instant cake emulsifier is a food additive specifically designed to enhance the texture, volume, and stability of baked goods by promoting the uniform dispersion of fat and water molecules that would otherwise naturally separate. It functions by reducing surface tension between immiscible phases, allowing for finer air bubble incorporation during mixing, which results in cakes with a softer, more even crumb structure, improved moisture retention, and extended shelf life. This ingredient is typically a blend of emulsifying agents such as mono- and diglycerides, propylene glycol esters, or sorbitan monostearate, and is used in both commercial bakeries and home baking to ensure consistent quality, especially in high-ratio cakes where the sugar or liquid content exceeds the flour weight.

The global Instant Cake Emulsifier market size was estimated at USD 123.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
