Report Overview

Instant Dry Yeast is a type of yeast that is specifically formulated to be more convenient and efficient for use in various baking applications. It is a dehydrated form of *Saccharomyces cerevisiae*, a single-celled microorganism that ferments sugars in dough, producing carbon dioxide and alcohol, which causes the dough to rise. Instant Dry Yeast is designed to be more resistant to temperature changes and can be directly mixed with dry ingredients without the need for pre-dissolving in water, unlike active dry yeast. This product is widely used in bread making, pizza dough, pastries, and other yeast-leavened baked goods, offering a quick and reliable leavening action.
