This product is designed to mimic the taste and texture of whole milk powder while offering a more cost-effective alternative. IFFMP is widely used in the food industry for the production of various dairy products such as reconstituted milk, yogurt, ice cream, and bakery items. It is known for its ease of use, long shelf life, and ability to enhance the creaminess and richness of end products.

Additionally, the growing popularity of convenience foods and beverages is driving the demand for IFFMP as it is easy to store, transport, and use in various applications. Moreover, the rising awareness among consumers about the nutritional benefits of dairy products is also contributing to the market growth of IFFMP as it provides essential nutrients such as protein and calcium.

At the same time, market drivers such as the expanding food processing industry, technological advancements in dairy production, and the increasing adoption of IFFMP by food manufacturers are further fueling the market growth. The versatility of IFFMP in a wide range of food applications, its longer shelf life compared to fresh milk, and its ability to improve the sensory properties of food products are driving its adoption across

various sectors. Furthermore, the growing trend of clean label and natural ingredients in food products is creating opportunities for manufacturers to innovate and develop clean-label IFFMP formulations to meet consumer preferences.
