Report Overview

Instant fat powder is a processed food product designed to provide a concentrated source of dietary fats in a convenient, shelf-stable powder form. Typically derived from animal fats, vegetable oils, or dairy sources, it undergoes dehydration and emulsification to create a free-flowing powder that can be easily reconstituted with water or other liquids. It is widely used in food manufacturing, bakery, confectionery, dairy alternatives, and ready-to-drink beverages to enhance texture, mouthfeel, and caloric density. The product also finds applications in sports nutrition and meal replacements due to its high-energy content and ease of incorporation.
