Abstracts

The smart toilet seat originated in the United States, and was improved after being introduced in Japan, adding various functions such as heating the toilet seat, washing with warm water, drying with warm air, and sterilizing. Smart toilet lids are divided into two types: instant heating and heat storage. The instant heating means that hot water is produced immediately, and the water temperature is stable without installing a water storage tank. Compared with the heat storage toilet cover, the instant smart toilet cover will not breed bacteria and is safer and more hygienic. The smart toilet industry is in a stage of high-boom development, with huge market demand potential, and the huge market space prompts a gradual increase in participants. However, due to the complexity of smart toilet technology, it involves water, electricity, heating, machinery, sensing, injection molding, welding and other fields. , industry competition barriers are mainly reflected in multi-dimensional aspects such as basic safety quality & high-performance quality, R&D and testing, channels, and brands. From the perspective of the industry, there are few supporting enterprises, and the entry threshold is relatively high. The production capacity mainly comes from three types of enterprises: sanitary ware, home appliances and professional electronic appliances. At present, the industry competition pattern has not yet formed. As competition intensifies, the company's product quality and R & D strength Requirements such as marketing and channel layout continue to improve, and the advantages of leading companies will gradually emerge. It is expected that the industry concentration will continue to increase. Japan (penetration rate of 80%+), South Korea (penetration rate of 60%+) and China are in the East Asian circle, and they have a sense of ritual and cultural significance for cleaning themselves in addition to basic hygiene needs. The rise and development iteration of smart toilets in Japan and South Korea is inseparable from the Japanese and Korean people's advanced pursuit of life rituals and personal hygiene after the economic foundation has developed to a certain level, as well as the improvement and maturity of related

companies in terms of technology and quality.
