Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Instrument Panel Beam competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The instrument panel beam is used as a component to strengthen the instrument panel of the vehicle body. The instrument panel beam is a component consisting of hollow materials with a circular cross section. Its shape is that the large diameter part and the small diameter part are connected with each other in the axial direction, and are arranged in the width direction of the vehicle through the bracket. In order to reduce the mass of the car, we also hope that the instrument panel crossbeam has a lower mass and is made of aluminum and other metals. The dashboard crossbeam is a key component of the internal structure of the car, used to support the dashboard and various control panels to ensure the safety and stability of the cockpit. In recent years, with the improvement of automobile lightweight and safety performance, the materials and designs of dashboard crossbeams have continued to evolve. Modern dashboard crossbeams widely use high-strength steel, aluminum alloy or composite materials, combined with precision stamping, casting and injection molding technology, to achieve the dual goals of weight reduction and structural strengthening. In the future, the development of dashboard crossbeams will pay more attention to intelligence and integration. In terms of intelligence, by integrating sensors and intelligent control units, dashboard crossbeams will participate in the vehicle's active safety systems, such as collision warning and automatic driving assistance, to improve driving safety. In terms of integration, the crossbeam will serve as a carrier for on-board electronic equipment, integrating more functional modules such as display screens, air-conditioning vents and audio systems, optimizing the cockpit layout and improving user experience. In addition, with the popularization of electric vehicles, the design of dashboard crossbeams will

take more into account the needs of electromagnetic compatibility and battery layout.

The global Instrument Panel Beam market size was estimated at USD 4722.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
