## Abstracts

Insulated case breakers enclose all components within an insulated case. Unlike molded case circuit breakers (MCCB), insulated case circuit breakers feature a two-step stored energy mechanism, allowing them to operate at larger frame sizes and higher amp ratings. They are available in both fixed-mount and draw-out enclosures and are constructed entirely of plastic, with no metal components in the frame. This design enhances electrical insulation and safety, effectively preventing accidents caused by electrical faults and short circuits.

The global Insulated Case Breakers market size was estimated at USD 715.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
