Abstracts

Insulated drinkware, or double-walled cups, are general cups that has outer and inner walls to maintain temperatures of drinkables. The inner wall of insulated cups is generally made up of stainless steel whereas the outer wall can be made up of plastic, stainless steel or any other types of materials that have been used for surfacing since last few years. Sometimes, glass, ceramics or plastics can be used as interiors for insulated cups. Apart from these materials, various other materials are used for the manufacturing of insulated cups including styrofoam, paper, and acrylic. These alternatives are predominantly suitable for those with a sharp palate who do not like the taste when drinking from metal, especially with some kinds of beverages. Insulated cups are gaining ground gradually with the increasing food service restaurants and caf?s. The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.
