Abstracts

An insulated hopper dryer is a specialized industrial drying system designed to efficiently remove moisture from plastic pellets or granules prior to processing, such as injection molding or extrusion. It consists of a thermally insulated hopper that stores the material while a built-in heating element and dehumidifying unit circulate dry, heated air through the pellets, ensuring consistent and uniform drying without heat loss or moisture reabsorption. The insulation minimizes energy consumption by retaining heat, while integrated controls allow precise regulation of temperature and airflow to match specific material requirements, thereby preventing defects like splay, bubbles, or reduced mechanical properties in the final plastic product.

The global Insulated Hopper Dryer market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
