Report Overview

Insulated Metallic Substrate PCB (IMS PCB) is a type of printed circuit board that combines the benefits of both a metal-based substrate and electrical insulation. It consists of a metal layer (usually aluminum) that acts as a heat sink, providing efficient heat dissipation, and a layer of dielectric material which provides electrical insulation and circuit board stability. IMS PCBs are commonly used in high-power applications where heat management is critical, such as LED lighting, power amplifiers, automotive electronics, and power supplies. The insulated metallic substrate allows for effective thermal management while maintaining excellent electrical performance, making it a popular choice in industries where heat dissipation is a crucial consideration.
