Abstracts

Insulated safety glass, also known as insulated laminated glass or safety insulating glass, is a composite glazing product that integrates multiple functional layers to provide enhanced performance, security, and energy efficiency. It typically consists of two or more panes of glass separated by a spacer and sealed to create an insulating air or gas-filled cavity, while at least one of the glass layers is laminated with a polyvinyl butyral (PVB) or ethylene-vinyl acetate (EVA) interlayer that holds the glass together if shattered. This dual construction offers improved thermal insulation and acoustic performance compared to monolithic glass, alongside critical safety features such as impact resistance, reduced risk of injury from broken glass, and protection against forced entry or extreme weather events. Widely used in architectural, automotive, and specialized industrial applications, this product meets stringent regulatory standards for both energy conservation and human safety.

The global Insulated Safety Glass market size was estimated at USD 5714.29 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
