Abstracts

An insulated sheathed cable is a composite electrical conductor designed for the transmission and distribution of electrical power or signals, consisting of one or more insulated conductive cores (typically made of copper or aluminum) encased within an outer protective sheath. The insulation material, which may include polymers such as PVC, XLPE, or rubber, serves to prevent electrical leakage and short circuits, while the sheath?often constructed from materials like PVC, LSZH (low smoke zero halogen), or thermoplastic?provides mechanical protection, environmental resistance (to moisture, chemicals, abrasion, and UV exposure), and enhanced safety by reducing fire hazards. These cables are engineered for use in a wide range of applications, including building wiring, industrial installations, underground and overhead power networks, and renewable energy systems, where durability, reliability, and compliance with international safety and performance standards are critical.

The global Insulated Sheathed Cable market size was estimated at USD 28540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
