Report Overview

Insulated wall panels (IWP) are prefabricated insulated structural elements used in building walls. They replace the conventional stud or stick frame construction. They are made in a factory and shipped to job sites, where they are connected together to construct a building. Insulated panels can be used in almost any architectural setting, but are most common in residential constructions. The greatest advantage of these panels is that they provide superior and uniform insulation in comparison to more common methods of house construction. When installed appropriately, IWPs provide a more airtight dwelling, making the building more comfortable, energy-efficient, and quieter.

Growth of the construction industry owing to urbanization and simplified utility, along with lower costs of insulated wall panels drive the growth of the market. The eco-friendly nature of insulated wall panels is expected to provide tremendous growth opportunities for the insulated wall panel market.
