Abstracts

Insulating glass sealant refers to specialized polymer-based compounds, typically formulated from materials such as silicone, polyurethane, or polysulfide, designed to create a hermetic and structurally stable seal between glass panes in multi-pane insulating glass units (IGUs). These sealants serve critical dual functions: preventing the ingress of moisture and atmospheric gases (such as argon or krypton) that fill the cavity to enhance thermal insulation, while also providing mechanical adhesion and durability against environmental stressors like UV radiation, temperature fluctuations, and wind loads. The performance of insulating glass sealants directly impacts the longevity, energy efficiency, and structural integrity of windows and facades in residential, commercial, and industrial buildings.

The global Insulating Glass Sealant market size was estimated at USD 1480.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
