Abstracts

Insulating paste is a high-performance electrical insulating material composed of polymers, fillers, and additives designed to provide dielectric protection in electronic devices and components. It is typically used to coat or encapsulate electrical parts to prevent short circuits, moisture ingress, and corrosion, thereby enhancing device reliability and longevity. Insulating pastes exhibit excellent thermal stability, chemical resistance, and electrical insulation properties, making them suitable for applications such as transformers, motors, capacitors, and printed circuit boards. The paste form allows for easy application through methods like screen printing or dispensing, enabling precise coverage of complex geometries. Advances in formulation have led to the development of environmentally friendly insulating pastes with low volatile organic compound (VOC) emissions and improved performance under harsh operating conditions. Their versatility and protective qualities make insulating pastes indispensable in modern electronics manufacturing.

The global Insulating Paste market size was estimated at USD 4126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
