Abstracts

Integrated into a ski backpack or vest, an avalanche airbag system is comprised of an airbag and power source (either a canister of compressed air or gas or an electric fan). When a skier (or snowboarder, sledder, etc.) pulls the attached handle, the airbag inflates to about 150 liters around and behind her torso. In the event of a slide, the inflated airbag keeps the skier at or near the surface of the snow thanks to a process known as granular segregation (i.e. in a mixture, larger objects are more likely to stay at the top while smaller objects sink down).

The global Integrated Avalanche Airbag System market size was estimated at USD 158.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.35% during the forecast period.
