Abstracts

An integrated bridge system is a combination of numerous systems including autopilot, radar, gyro, position fixing systems, ECDIS, power distribution system, steering gear, sensors, and GMDSS which are interconnected to allow a centralized monitoring of various navigational tools and improve the overall operational efficiency of ships. The growth of the integrated bridge systems for ships market is expected to be driven by key factors such as the increasing international seaborne trade and shipbuilding, growing demand for cruise ships, and a rise in spending on naval warships. However, the high cost of customized integrated bridge systems is expected to restrict the market growth in the global market.
