Abstracts

A building management system is a computer system designed to keep track of, and control, the various systems in a building. These systems include: Power, Climate control, Building entry/exit , Water (pumps), Elevators and Lights. In terms of a building management system, what integrated means is that the building's system management capabilities were part of the building's initial design. In other words, they weren't added after-the-fact. Take, for example, an extension to a house, like another bedroom. This is something a lot of families consider when their needs change with time. If the bedroom were integrated, it would have been designed and built when the rest of the house was. It would exist when you moved in.

The global Integrated Building Management Systems market size was estimated at USD 5926.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.40% during the forecast period.
