Abstracts

The Integrated Cooling Plate is a high-efficiency thermal management component designed for electric vehicle battery packs. Made from high-thermal-conductivity aluminum alloys or aluminum composite materials, it is manufactured using advanced techniques such as friction stir welding, laser welding, and liquid cooling channel molding. The cooling plate allows coolant to directly contact the bottom or sides of the battery pack, efficiently dissipating heat and maintaining optimal operating temperatures. Compared to traditional air cooling or separate water-cooling systems, an integrated cooling plate offers superior thermal efficiency, a lighter and more compact design, reduced thermal runaway risks, improved charging/discharging performance, and extended battery lifespan.

The global Integrated Cooling Plate market size was estimated at USD 1280.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.00% during the forecast period.
