## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Integrated Down-the-hole Drill competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The integrated down-the-hole drill is an efficient drilling equipment that integrates a power system, a rock drilling mechanism, and a propulsion device. It uses down-the-hole impactor (DTH) technology to drive the drill bit to impact and break the rock layer through high-pressure air. It is suitable for medium-deep hole (usually 50-300 meters) drilling operations such as mining, water conservancy projects, and rock and soil anchoring. It is characterized by compact structure and strong mobility. It can be mounted on a crawler or tire chassis to adapt to complex terrain. Compared with the split drilling rig, the efficiency is increased by more than 30%, and it is especially suitable for construction in hard rock layers (such as granite and quartzite).

The global Integrated Down-the-hole Drill market size was estimated at USD 1510.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
