Abstracts

The EPB integrated system is based on an Electronic Control Unit (ECU) and an actuator mechanism. The brake caliper itself provides a connection between the hydraulic actuation of the foot brake and electrically actuated parking brake. The holding mechanism is activated by the driver via a button, which in turn makes brake pads electrically apply onto the rear brakes. The parking brake is operated by the actuator, which is screw-fixed directly to the brake caliper housing, and actuated via a switch in the vehicle interior. That eliminates the need for hand brake lever and cables, providing multiple advantages such as greater room inside the vehicle, simpler installation of EPB on vehicles, prevention of issues related to mechanical wear or temperature problems. All this ultimately results in brake power improvement in all conditions. The Integrated Electronic Parking Brake System is an advanced automotive parking technology that has gained widespread adoption in the market. This system replaces the traditional handbrake with an electronic control unit that manages the vehicle's parking brake in a computerized manner. With the evolving automotive industry, the market trends clearly favor the adoption of Integrated Electronic Parking Brake Systems. Firstly, it offers enhanced safety by automatically releasing the brake force, preventing the vehicle from rolling on slopes, especially in scenarios like traffic signals. Secondly, the Integrated Electronic Parking Brake System is more convenient to operate, eliminating the need for manually pulling a brake lever, making parking simpler and worry-free. Additionally, this technology contributes to improving vehicle driving performance and provides greater design freedom, as it allows for the design of the rear of the vehicle without being constrained by traditional mechanical brake systems. Overall, the Integrated Electronic Parking Brake System represents the future direction of the automotive industry, aligning with consumers' demands for safer, more convenient, and smarter automotive technology.

The global Integrated Electronic Parking Brake System market size was estimated at USD 3360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
