Abstracts

Integrated facility system switches refer to network switching devices used to connect, control and manage various subsystems and devices in integrated facility systems. These subsystems and equipment may include electrical systems, lighting systems, HVAC systems, security monitoring systems, communications systems, etc. Integrated facility system switches enable different devices and systems to communicate, collaborate, and centrally manage each other by providing network connectivity and data exchange capabilities. These switches typically have multiple ports for connecting various devices and support various network protocols and communication standards for flexible integration and control. The main function of the integrated facility system switch is to promote the centralized monitoring, management and control of the integrated facility system to improve the operating efficiency, safety and comfort of the building. With the widespread application of information technologies such as cloud computing, big data, and the Internet of Things, the network equipment industry has ushered in new development opportunities. Especially in the context of the country's continuous encouragement and support for informatization construction, driven by policies such as "Internet +", Industry 4.0 and new infrastructure, the integrated facility system switch market has further developed. In addition, switches are mainly composed of chips, optical devices, connectors, resistive components, casings, PCBs and other resources, among which chips account for the highest cost. The rapid growth in computing power demand has led to the continuous expansion of the switch market, and has also put forward higher requirements for the performance and quality of key components such as chips. In general, the integrated facility system switch market has broad development prospects and huge market potential. With the further advancement of informatization construction and the continuous emergence of new technologies, the market will continue to maintain a growth trend.

The global Integrated Facility System Switch market size was estimated at USD 4014.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
