Abstracts

Integrated Gate Commutated Thyristor (IGCT) Modules are advanced power electronic devices used in high-power applications for electrical energy control. They are a type of thyristor-based semiconductor device but possess characteristics that make them suitable for high-voltage and high-current applications. IGCTs combine the advantages of both gate turn-off thyristors (GTOs) and insulated gate bipolar transistors (IGBTs). They offer low conduction losses similar to IGBTs while having the turn-off capability of GTOs. This makes them efficient for high-power applications where both low on-state losses and the ability to switch off current are essential. Major manufacturers in the market include Hitachi Energy, Zhuzhou CRRC, etc., and the industry is highly concentrated. In 2022, the share of major manufacturers will account for more than 90%.

The global Integrated Gate Commutated Thyristors Modules market size was estimated at USD 477.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
