Report Overview

Integrated linear motor shafts require linear guides to maintain the position of the movers in the magnetic field generated by the magnetic rails. In the same way as the encoders of rotary servo motors are mounted on the shaft for position feedback, integrated linear motor axes require feedback devices for linear position feedback - linear encoders, which directly measure the position of the load and thus improve the position accuracy of the load.

The global Integrated Linear Motor Shaft market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.35% during the forecast period.
