Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Integrated Molding Choke competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Integrated Molding Choke sales reached approximately 20,334 million units, with an average global market price of around US\$ 205.9 k unit. An Integrated Molding Choke (IMC) is an electronic component used in power supply and filtering circuits, particularly in applications where high efficiency, low noise, and compact size are desired. It combines the functionality of a choke (inductor) with advanced manufacturing techniques to provide a highly integrated and optimized solution for managing electrical current flow and suppressing unwanted electromagnetic interference (EMI). Global Integrated Molding Choke include Cyntec, TDK, YAGEO Group, Vishay and Shenzhen Microgate Technology, etc. Global top five manufacturers hold a share over 55%. The largest market is Asia-Pacific, has a share over 70%, followed by North America and Europe, with around 13% and 10% market share respectively. In terms of product, Small Size is the largest segment, with a share about 70%. And in terms of application, the largest application is Consumer Electronics, has a share over 80%, followed by Automotive Electronics, AI Servers & Traditional Servers, Industrial Equipment, RF & Telecommunications and Medical Devices, etc. As smartphones, wearable devices, and laptops continue to evolve towards thinner and lighter designs, integrated molded inductors must offer smaller size, higher power density, and superior heat dissipation. Maintaining low loss and stability under high-frequency and high-current conditions will become a core trend in the industry. The rapid adoption of new energy vehicles, hybrid vehicles, and charging stations has driven strong demand for automotive-grade integrated molded inductors. They are widely used in key components such as onboard DC-DC converters, onboard chargers (OBCs), and

inverters. Smart manufacturing and digital monitoring are gradually being incorporated into inductor production, improving yield and consistency while reducing production costs. At the same time, driven by policy support and market demand, domestic manufacturers are accelerating R&D investment, leading to a clear trend of domestic substitution.

The global Integrated Molding Choke market size was estimated at USD 4186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
