Report Overview

Integrated Recirculating Aquaculture systems are among the technologies at the vanguard of aquaculture engineering. Recirculating Aquaculture Systems (RAS) allow fish to be farmed in net cages or tanks instead of open-air ponds. These systems allow high-density fish production within a breeding environment that is controllable by the operator of the facility. The filters of the recirculating system clean and recycle the water, sending it back to the tanks. New water is only added to the tanks to compensate for water lost due to splashing and evaporation, and to replace that used to remove waste materials.

The global Integrated Recirculating Aquaculture System (RAS) market size was estimated at USD 4458.80 million in 2023 and is projected to reach USD 9604.37 million by 2032, exhibiting a CAGR of 8.90% during the forecast period.

North America Integrated Recirculating Aquaculture System (RAS) market size was estimated at USD 1345.86 million in 2023, at a CAGR of 7.63% during the forecast period of 2024 through 2032.
