Abstracts

When the intelligent computing center is different from the traditional data center, it needs to adopt a heterogeneous computing architecture including general computing power and intelligent computing power (GPU, NPU, FPGA, ASIC, etc.) to enable it to have the ability to process large-scale, multi-modal data in parallel, so as to provide a new type of public computing power infrastructure for computing power services, data services and algorithm services required for artificial intelligence applications, and support data openness and sharing, intelligent ecosystem construction and industrial innovation aggregation through the production, aggregation, scheduling and release of computing power. Intelligent computing services refer to infrastructure services based on AI-specific computing power such as GPU, FPGA, ASIC, etc., mainly including intelligent computing public cloud services, intelligent computing integration services, and intelligent computing infrastructure as a service (AI Infrastructure as a service, referred to as AI IaaS). Intelligent computing public cloud services refer to GPU cloud host services provided in a public cloud mode; intelligent computing integration services mainly refer to professional and management services such as consulting, integration, development, and operation and maintenance provided by manufacturers in the process of helping customers build private intelligent computing infrastructure; AI IaaS refers to suppliers providing customers with one-stop intelligent computing power services in the form of leasing, and the suppliers provide subsequent operation and maintenance guarantees. The AI IaaS market is further divided into two sub-markets: GenAI IaaS for generative AI and Other AI IaaS (such as traditional rendering, simulation, visual Internet of Things reasoning and other business scenarios).

The global Intelligent Computing Service market size was estimated at USD 4075.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 35.00% during the forecast period.
