Intelligent content risk control service is a content review and risk control system based on artificial intelligence technology, which aims to automatically identify and filter illegal, inappropriate or harmful content on network platforms. Through technologies such as natural language processing (NLP), image recognition and machine learning, the service can detect various forms of content such as text, pictures, videos, etc. in real time, and quickly identify potential legal, ethical or security risks. It is widely used in social media, online forums, e-commerce platforms, etc., helping enterprises and platforms ensure content compliance, improve user experience, and effectively reduce risks. Intelligent content risk control services are crucial in the current era of digitalization and information explosion.
