## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Intelligent e-Paper Bedside Display competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A intelligent e-paper bedside display is a patient information display terminal that uses electronic paper (ePaper) display technology and is typically installed beside a hospital bed. The device presents real-time information such as patient identification, admission details, nursing level, allergy history, and care reminders. It connects to hospital information systems (HIS, EMR, NIS) through wireless communication technologies such as Wi-Fi, BLE, Zigbee, or NFC to enable automatic data updates. Featuring ultra-low power consumption, paper-like readability, wide viewing angles, and long battery life, the smart ePaper bedside card may also integrate functions such as nurse call, interactive prompts, QR code identification, and asset/location management. These capabilities enhance ward digitalization, improve nursing efficiency, and strengthen patient safety. In 2024, global sales of intelligent e-paper bedside displays reached 1.24 million units, with an average selling price of US\$158 per unit. The single-line production capacity of the intelligent e-paper bedside display is approximately 50,000 units per year, with a gross profit margin of approximately 20%-35%. The upstream of intelligent e-paper bedside display includes suppliers of ePaper displays, display driver ICs, wireless communication modules (Wi-Fi, BLE, Zigbee, NFC), MCUs, batteries and power-management components, as well as structural parts and contract manufacturing. It also involves software platform vendors that provide firmware development, communication protocols, and integration with hospital information systems. Downstream demand primarily comes from hospitals, specialty clinics, rehabilitation centers, and nursing institutions, where the devices are deployed in inpatient wards to present critical patient information and support nursing

workflows, serving as key terminals within smart ward solutions, digital nursing stations, and hospital asset-management systems.

The global Intelligent e-Paper Bedside Display market size was estimated at USD 196.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
