Abstracts

The intelligent elevator dispatching system is an advanced elevator dispatching technology based on artificial intelligence, the Internet of Things (IoT) and big data analysis. The system monitors passenger flow, elevator operation status and floor demand in real time, and uses optimization algorithms to dynamically allocate elevator resources to reduce waiting time, improve transportation efficiency and reduce energy consumption. Compared with traditional dispatching methods, the intelligent elevator dispatching system can support intelligent functions such as face recognition, mobile phone reservation, and contactless elevator calling, and is suitable for high-traffic scenes such as office buildings, hospitals, hotels, and subway stations. The intelligent elevator dispatching system market has broad prospects and strong growth momentum. This growth is mainly driven by three factors: First, the deep integration of IoT, AI, and big data analytics technologies allows the system to dynamically allocate resources by monitoring passenger flow and elevator status in real time, significantly reducing waiting time, improving transportation efficiency, and lowering energy consumption. Second, the accelerated global urbanization process and the urgent need for efficient vertical transportation in high-traffic areas such as commercial buildings, hospitals, and hotels, especially in the Asia-Pacific region, where rapid changes in the Chinese market and the intelligent upgrades in emerging economies like India have contributed significantly to the growth. Third, the widespread adoption of intelligent functions such as contactless elevator calling, facial recognition, and mobile phone reservations meets the post-pandemic demand for improved hygiene, safety, and user experience. In the future, with technological iteration and the promotion of intelligent building standards, the system will further evolve towards predictive maintenance, energy management, and cloud-integrated solutions, continuously releasing market potential.

The global Intelligent Elevator Dispatching System market size was estimated at USD

1062.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
