Abstracts

Intense Pulsed Light (IPL) Hair Removal Equipment is a beauty device that uses intense pulsed light technology for hair removal. It works by emitting broad-spectrum light pulses, which are absorbed by the melanin in the skin and converted into heat energy. This heat damages the hair follicles, inhibiting future hair growth. Compared to traditional laser hair removal, IPL devices cover a wider spectrum of light, making them more adaptable to different skin types and hair colors, thus catering to a broader consumer base. IPL hair removal equipment is classified into two categories: home-use and professional-grade devices. Home-use devices are compact and designed for personal use at home, with relatively lower power and simpler interfaces. Professional-grade devices are used in beauty salons and medical institutions, with higher power outputs and more advanced features, such as automatic adjustments, skin-type recognition, and cooling systems. These devices are capable of providing efficient and safe hair removal experiences, and they can be used on various areas, including the face, underarms, legs, and more sensitive regions like the bikini line.

The global Intense Pulsed Light Hair Removal Equipment market size was estimated at USD 10200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
