Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Intensive Care Infusion Warmer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Intensive Care Infusion Warmer production reached approximately 42 k units, with an average global market price of around US\$ 1983 per unit. An intensive care infusion warmer is a medical device designed to heat intravenous fluids, blood, and blood products to near-body temperature before infusion, ensuring stable thermal management for critically ill patients. These devices are essential in intensive care units (ICUs), operating rooms, and emergency settings to prevent hypothermia, improve hemodynamic stability, and enhance patient recovery outcomes, particularly during massive transfusions, fluid resuscitation, or long-duration therapies. The upstream supply chain includes manufacturers of heating elements, temperature sensors, control systems, infusion sets, blood bags, and medical-grade plastics. Midstream players are medical device companies that integrate these components into infusion warming systems while meeting clinical safety and regulatory standards. Downstream, products are distributed through hospital procurement departments, medical device distributors, and critical care equipment suppliers, ultimately serving ICUs, surgical departments, emergency care providers, and military or field medical units.

The global Intensive Care Infusion Warmer market size was estimated at USD 84.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
