## Abstracts

An interactive robot is an autonomous robot that interacts and communicates with humans or other autonomous physical agents by following social behaviors and rules attached to its role. Like other robots, a social robot is physically embodied. Some synthetic social agents are designed with a screen to represent the head or "face" to dynamically communicate with users. The increasingly widespread use of more advanced social robots is one of several phenomena expected to contribute to the technological posthumanization of human societies, through which process a society comes to include members other than natural biological human beings who, in one way or another, contribute to the structures, dynamics, or meaning of the society.

The global Interactive Robots market size was estimated at USD 1153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 26.50% during the forecast period.
