Abstracts

Interlocked armoured cables are a type of electrical cable featuring a flexible metallic armour layer, typically made of galvanized steel or aluminum, wound helically around the insulated conductors to provide mechanical protection, crush resistance, and enhanced durability in demanding environments. These cables are designed for use in applications where exposure to physical damage, moisture, chemicals, or extreme temperatures is a concern, such as in industrial plants, mining operations, offshore installations, and underground wiring systems. The interlocked design allows for flexibility while maintaining robust shielding against external stresses, making them suitable for both fixed installations and applications requiring occasional movement. They often comply with international standards for safety and performance, ensuring reliability in power transmission, control circuits, and instrumentation networks under harsh conditions.

The global Interlocked Armoured Cables market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
