In 2024, global Interlocking Rigid Chain sales reached approximately 57487 units, with an average global market price of around US\$1286 per unit. Interlocking Rigid Chain is a type of drive or pushing mechanism made of specially shaped links that interlock to form a rigid, straight column during operation, capable of withstanding significant thrust and compressive loads. It can coil compactly like a flexible chain during the return stroke, yet maintain linear rigidity in the working stroke. Commonly used in heavy-duty lifting, pushing, or positioning applications such as industrial lifts, stage machinery, and heavy material handling systems, it offers advantages including compact structure, high load capacity, and customizable travel length.

The global Interlocking Rigid Chain market size was estimated at USD 73.95 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
