The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Intermittent Pneumatic Compression (IPC) Thrombosis Devices competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An IPC (Intermittent Pneumatic Compression) device is a medical apparatus designed to prevent deep vein thrombosis (DVT) by intermittently inflating and deflating air-filled cuffs wrapped around the limbs, usually the legs. The rhythmic pressure mimics natural muscle contractions, promoting venous blood return to the heart and reducing blood stasis. IPC devices are widely used in clinical settings for patients who are bedridden, post-surgical, or have limited mobility, serving as a non-invasive and effective method to lower the risk of thromboembolic events. The intermittent pneumatic compression (IPC) pump market is driven by the increasing prevalence of conditions like deep vein thrombosis (DVT), lymphedema, and chronic venous insufficiency, especially among aging populations and post-surgical patients. As the awareness of preventative measures for blood clots grows, IPC pumps are becoming a preferred non-invasive solution in hospitals, clinics, and even home care settings. Technological advancements, such as portable and user-friendly designs, have further expanded the adoption of IPC pumps, making them accessible for personal use. Additionally, the rising incidence of sedentary lifestyles and chronic diseases has led to a greater need for therapeutic devices that support circulation, driving market growth. However, the IPC pump market faces challenges, including the high cost of advanced devices, which may limit adoption in low- and middle-income regions. Reimbursement issues and lack of widespread awareness in some markets also hinder growth, as patients and healthcare providers may prioritize less costly or alternative treatments. Moreover, improper use or lack of adequate training on IPC pumps can lead

to suboptimal outcomes, reducing their perceived effectiveness. Addressing these challenges requires efforts to enhance affordability, increase education on device usage, and ensure proper integration of IPC pumps into therapeutic regimens globally.

The global Intermittent Pneumatic Compression (IPC) Thrombosis Devices market size was estimated at USD 875.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
