Abstracts

Intermodal container chassis are specialized trailers designed specifically for the transport of shipping containers by road, serving as a critical link between ports, rail terminals, and inland destinations. These chassis feature a skeletal frame with twist locks or other securing mechanisms to safely fasten standard-sized containers (typically 20 or 40 feet in length), and they are often equipped with sliding tandem axles for weight distribution and maneuverability. As an essential component of the global supply chain, they enable the seamless transfer of goods across different modes of transportation?such as from ships to trucks or trains to trucks?without the need to unload and reload cargo, thereby improving efficiency, reducing handling costs, and minimizing the risk of damage or theft during transit.

The global Intermodal Container Chassis market size was estimated at USD 1850.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
