In 2024, global Internal Circulation Fluidized Bed Gasification System sales volume reached approximately 7,558 units, with an average global market price of around US\$ 25,714 per unit. The Internal Circulation Fluidized Bed Gasification System is a thermochemical process that converts solid fuels (such as biomass, coal, or waste) into syngas by utilizing a dual-zone fluidized bed design. It combines a dense-phase combustion zone with a lean-phase gasification zone within the same reactor, allowing in-situ recirculation of hot bed materials (e.g., sand or ash). This internal circulation facilitates efficient heat transfer, promotes uniform temperature distribution, and supports stable endothermic gasification reactions without external heat sources.

The global Internal Circulation Fluidized Bed Gasification System market size was estimated at USD 194.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
