Abstracts

Internal Hexagon Implant Systems are widely used dental implant platforms featuring an internal hexagonal connection between the implant fixture and abutment. This design enhances mechanical stability, load distribution, and long-term prosthetic retention by creating a precise interlocking fit. The hexagonal connection minimizes micro-movement, reducing stress at the bone-implant interface and decreasing the risk of peri-implant bone loss. Compared to external hex implants, internal hex implants offer better biomechanical engagement, leading to enhanced primary stability and reduced abutment loosening.

The global Internal Hexagon Implant System market size was estimated at USD 2267.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
