Abstracts

Internal pipe coating refers to the application of protective layers or linings on the interior surfaces of pipes, typically used in industries such as oil and gas, water and wastewater management, chemical processing, and power generation to prevent corrosion, reduce friction, improve flow efficiency, and extend the operational lifespan of pipeline infrastructure. These coatings can be made from materials like epoxy, polyurethane, polyethylene, or cement mortar, and are applied through methods such as spray, brush, or robotic application depending on pipe diameter, accessibility, and environmental conditions. The primary function is to create a barrier between the pipe material and the conveyed substance, mitigating degradation caused by abrasive, corrosive, or high-temperature contents while maintaining safety, regulatory compliance, and cost-effectiveness over the pipeline's lifecycle.

The global Internal Pipe Coating market size was estimated at USD 2250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
