Abstracts

Internal sizing agents are chemical substances applied to paper and paperboard during manufacturing to modify the surface and structural properties of the material, primarily by reducing its absorbency and improving resistance to liquids, inks, and solvents; these agents work by creating a hydrophobic barrier within or on the paper fibers, allowing for better printability, reduced feathering, and enhanced durability in applications such as packaging, printing, writing, and specialty papers, with common types including alkyl ketene dimer (AKD), alkenyl succinic anhydride (ASA), and rosin-based sizes, each selected based on factors like production speed, cost, paper grade, and environmental considerations.

The global Internal Sizing Agents market size was estimated at USD 1150.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
