The Internet-connected doorbell, also known as a video doorbell or smart doorbell, is a home security and automation device that combines a traditional doorbell with integrated cameras, microphones, speakers, and wireless connectivity?typically via Wi-Fi or, in some cases, cellular networks. It enables real-time video and audio communication between a visitor at the door and the homeowner or resident, regardless of their physical location, through a paired smartphone app or web interface. These devices often include motion detection sensors, night vision capabilities, and cloud or local storage options for recorded video footage, allowing users to monitor entryways, receive alerts for activity, review past events, and in some models, interact via two-way audio to speak with delivery personnel or deter potential intruders. Advanced features may incorporate integration with broader smart home ecosystems?such as compatibility with digital assistants, smart locks, or lighting systems?to create automated routines, enhancing both convenience and security.
