Report Overview

The Internet of Things (IoT) Insurance refers to the use of connected devices and sensors to collect data on various aspects of an insured asset or individual's behavior. This data is then used by insurance companies to assess risks more accurately, customize insurance policies, and offer personalized premiums. IoT Insurance can cover a wide range of areas such as home insurance (using smart devices to monitor for potential risks like water leaks or fires), health insurance (tracking individuals' health metrics through wearables), and auto insurance (monitoring driving behavior through telematics devices).
